MAINTENANCE FOR YOUR NEW BRIDGE

By now you're probably enjoying the newfound strength and function of your teeth. Replacing your missing teeth with a fixed bridge should make a world of difference in your quality of life.

Here are a few suggestions for maintaining your new bridge:

- Avoid hard or brittle foods, which can break the bridge
- Lengthen the life of your restoration with a little extra flossing and brushing to eliminate the plaque that can build up between your bridge and your natural teeth
- Use a floss threader or superfloss if you're having trouble cleaning between your bridge and your gums
- If you have soreness or feel any looseness, call us at 231-972-7104

Practice strong dental habits with your bridge, just as you would your own natural teeth, and it will last a long time.

Thank you for choosing our dental practice. If you've been happy with the care we've provided, we hope you will share the experience with your friends and family.
